

Gridwall Compare Tool Content Guidelines

About these guidelines

- These guidelines only encompass the MVP tool (i.e. phones) at the gridwall level and don't account for Accessories. Review the "New GW Compare Tool" section of this [illustrative model of new proposed content](#) for more context. It illustrates the new content table in the tool using an example smartphone's features and specs.
- These guidelines are intended to address the unique needs of the Gridwall Compare Tool. There are more general guidelines and best practices that should still be adhered to within the tool, that aren't covered here. Refer to **Brand Central > Verizon Design System**, our "single source of truth" for content guidelines on a broader CXO scale.

Content table nomenclature definitions (internal-facing only)

Name	Definition
Gridwall (GW) key group name	Highest-level category name that represents a particular feature or thematic set of features. Ex: "Battery life"
Display/key name(s)	Second-tier category name that represents a particular feature or element of a feature. Ex: • Key group name: "Battery life" • Display/key name: "Talk time"
Key value(s)	Specifications ("specs"). Technical details about a key group or display/key name. May include quantifiable data. Ex: • Key group name: "Battery life" • Display/key name: "Talk time" • Key value: "Up to 31 hrs"

[Image: Screenshot diagram of all internal definitions in situ once live]

Content focus in the tool

Purpose

- The compare tool is only intended for features and specs that customers desire to compare. This coincides with features and specs that impact purchase decisions.
- Help customers and prospects compare 2-4 products on MVO and MVA. Content should be:
 - Informational
 - Consistent
 - Comparable
 - True at the model level
- Content should **not** be:
 - Promotional
 - Focused on offers beyond direct lifts from gridwall tiles e.g. badging or pricing showing offers applied)
 - SKU level (e.g. product availability, shipping)
 - Ancillary or unrelated to driving purchase decision-making

Best practices

Relationship to PDP

- The entirety of a PDP's content shouldn't be a part of the compare content table in the tool, but all product specs in the tool need to be present on respective PDPs.
- **GW key group names:** At times, it will make sense to create more specific gridwall key group names in the tool than on the PDP, to help break up larger blocks of content for comparability and prevent thematic overlap between categories.
- **Display/key names and key values** should match PDP nomenclature as closely as possible, as relevant. Because not all PDP info should be included in the content table, there might be good reason to use more focused nomenclature, e.g. in the case of Network.

“Sandwich” strategy: Arrangement and specificity of GW key groups in table

- Order considers the importance of features to prospects/customers as well as continuity with other device categories (beyond MVP launch of phones) for comparability.
- The content table should start and end with GW key group names that are shared across all device categories (phones, tablets/laptops, watches, jetpacks & hotspots)
- More unique GW key groups live in the middle of the content table.

[Image: Screenshot diagram illustrating table/comparability strategy in situ once live]

- Key group names within the tool should typically be more specific vs. PDP key group names, as features are more broadly grouped on PDP.
 - Specificity = more separation. More separation = smaller blocks of content for improved readability and comparability.
 - Specificity can also help alleviate thematic overlap in the tool.

Display/key names & key values

- Definition of and convention for display names:
 - There might be a key group with distinctly separate features. For example: A smartphone camera has a front camera, rear camera and video. Each should be broken out as a separate display/key name.
 - List each key value with a comma between. Don't use pipe separators. For more details, go to **Nomenclature: Key values**.

Adding new display/key name or key values that don't fit within any of the existing ones

- If you feel certain display/key names or key values could be important to making a purchase decision, reach out to a Learn journey segment content strategist.
- If you're not sure who that is, reach out to the Gridwall Product Experience Owner.
 - Content strategy can help with:
 - determining if it qualifies for inclusion, per customer research
 - advising where it should live (i.e. order) within the table
 - nomenclature/style guidance, as needed
 - alerting PDP Product Owner, if this type of information isn't already a part of the PDP and needs to be added

Anatomy

Navigation title

- Be as specific as possible for SEO purposes, in terms of what prospects and customers would actually search for. For example, when comparing smartphones, the title of the compare tray and page should be "Compare smartphones" not "Compare devices."

Hyperlinks

- **Don't** include hyperlinks within the tool beyond these exceptions, to keep experience from becoming complex:
 - CTA links related to search
 - Removing a product from comparison (i.e. "Remove")
 - Removing all products from comparison (i.e. "Clear all")
 - Links to pricing/offer-related modals (i.e. "Details")

Tooltips

- Refer to VDS for general tooltip guidelines.

Do	Don't
Do create tooltips for key groups only.	Don't create tooltips for display names or key values.
Do create tooltips sparingly for optimal user experience. Write in a way that's applicable to all relevant device categories/types.	Don't customize tooltip content based on a particular model, brand, or type of device.
Do write concise content that clarifies something i.e. a definition or contextual info.	Don't explain why a category might be relevant to a customer, as we don't want to create a tooltip for every key group. Research has shown customers typically do their own research based on key areas of interest before purchasing on dotcom or the app.
	Don't include titles within Compare tooltips.
Do use a minimum of 3 words or 12 characters.	Don't use for full offer terms, other legal copy or use more than 360 characters

Offer terms/legal disclaimers

- **Don't** include any offer terms within the tool with the exception of "Details" modal links related to any offer pricing.
- **Don't** include any disclaimers or related formatting or marks (i.e. superscript numbers, footnotes, footnote symbols such as asterisks or daggers) within the tool.

Grammar and mechanics

Capitalization

- Refer to VDS

GW key group names

- Don't include trademarks, service marks or registration marks.

GW key group name abbreviations and acronyms

- Assess how much value spelling out the abbreviation/acronym adds
 - If abbreviation more common than full spelling, use abbreviation only, e.g. "SIM card"
 - If both abbreviation and full spelling are uncommon/highly technical, use abbreviation only.
 - If a category name, consider writing a tooltip for it to provide a definition, e.g. "NFC."
 - If the full spelling helps clarify the topic, only use the full spelling and drop the abbreviation/acronym, e.g. "Hearing aid compatibility," "Bluetooth"

Display/key names

- Spell out and capitalize brand/proper names.
- Don't include trademarks, service marks or registration marks.
- Don't use tooltips.

Key values

- **Do not** follow the general rule of full spelling on first use, followed by the abbreviation/acronym in parentheses. Simply use the abbreviation/acronym as provided by the Device Marketing launch package i.e. OEMs.
- Don't use tooltips.
- Reduce redundancy and condense whenever possible, unless it makes meaning unclear or affects SEO. For example, if a subcategory of specs has a title, consider not repeating the word again within the spec itself, for example (crossout for illustration purposes only):
 - "Video: 4k and 1080p ~~video~~ recording up to 60 FPS"
 - Voice assistant: ~~Google assistant~~ Yes
 - Ex. exceptions: Price, camera

Including key values without a display/key name

- If any key values don't require a display name, list these ahead of any key values that do have a display name, e.g. Network.

[Image: screenshot of "Network" specs in situ once live]

Yes, no, N/A, en dash, em dash

Do	Do not
----	--------

Do spell out “Yes” and “No.” Specs sometimes contain single-letter abbreviations, so spelling out aids clarity.	Do not abbreviate as “Y” or “N.”
Do use “No” when a device or accessory <i>doesn’t have</i> a particular spec.	Do not use “N/A” which can mean both “not applicable” or “not available.”
Do use an en dash (–) to represent specs info that’s <i>not provided by an OEM</i> .	Do not use “N/A” which can mean both “not applicable” or “not available.” Do not use an em (—) dash.

Amounts of time

- Always include “Up to” ahead of an amount of time. Value should always be in hours, abbreviated
 - For example: “Talk time: Up to 50 hrs”

Brand names

- Always spell out
- Don’t include trademarks, service marks or registration marks.

Camera

- Though the gridwall key group name is “Camera,” display/key name should always be “Front camera” and “Rear camera” for SEO purposes and is an exception to the general “reduce redundancy” rule.
- For OEMs who use “dual” or “triple” nomenclature related to camera technology but don’t list anything specifically for the front camera display name, use what makes the most sense based on the specifics of the technology.
 - Dual/triple cameras: Repeat the MP (megapixel) value mentioned for the rear camera for the front camera
 - Rear camera specs not provided by OEM: Use “–” (en dash) signifying this info isn’t known
- For cameras that **are not** dual or triple, include “No” as the spec for the camera (front or rear) it doesn’t have.
- Use “–” (en dash) if this info is unknown.

Display

- Any mentions of “Up to 60 fps and HDR” should be updated to “4K Ultra HD”

[Image: Screenshot of example specs within a category]

- Spell out proper names, but don't include any registration marks or trademarks
- Always abbreviate common (i.e. oz, mm, TB) and less common (i.e. mAh) units of measurement

Measurement abbreviations

- Use common and uncommon abbreviations without a period.
- Add a space before any abbreviations to aid readability unless an OEM provides the specs without one.
 - **Correct:** A 10 oz phone
 - **Incorrect:** A 10oz phone
 - **Incorrect:** A 10 oz. phone

Special Characters

Colon, semicolon

- Only use colons if necessary to the convention of certain specs
 - Ex: Aspect ratio for displays (1:4)
 - Don't use semicolons

Comma

- Add commas within sentence fragments that require separation of listed items or values, and within numbers and pricing as needed
 - Ex: Samsung Galaxy A14 5G, USB-C to USB-C Cable, Terms and Conditions
 - Ex: 5,000 mAh
 - Ex: \$1,099.99

Pipe separation

- Confirm we can move away from this with GTS as it's less natural/common separator vs. commas, and can look similar to other marks such as forward and backslashes

En and em dashes

- Use as minimally as possible. The en (–) dash should always be used to replace content in the tool table cells where we don't have info provided by an OEM. Note difference from em (—) dash.

Superscript, asterisk, and other footnote symbols

- Don't use in tool

Forward slash

- Use when required by terminology e.g. “Memory/RAM” (i.e. more than one common name for the same feature) or for camera aperture, “f/2.8”

Quotation marks

- Don’t use single or double quotation marks in the content table part of tool

Trademark, registration symbols, and any other symbols

- Don’t use in the content table part of tool
- Spell “degrees” instead of using symbol
- For camera specs, use “f/” instead of the aperture symbol

Numbers within the content table

- Use numerals rather than spelling out to save space, unless a proper noun.
- Pricing: Don’t add cents for dollar amounts that are a whole number.
 - Ex: Starts at \$10/mo
 - Ex: Starts at \$27.77/mo
- Pricing, measurements, software version numbers: Always include zeros for clarity, whether leading with a zero ahead of a decimal for visibility, or including a zero at the end of a number.
 - Ex: 0.60 in

Recommended character lengths within table

GW key group names

- 2 words or 15 characters

Display/key name titles

- 3 words or 25 characters

Key value details, per display/key name

- Generally try to keep to 3 lines on mobile.

TO DO:

- ☒ ~~Comb through Device Launch + PDP guidelines~~
- ☒ ~~Refine + Decide where to put Terminology definitions~~ — Enrichment, tech-spec display name (i.e. attribute category), tech-specs
- ☒ ~~Wishlist/Qs for GTS~~ — emailed to Jamie
- ☒ ~~Key Qs for Catalog/Device Marketing/SEO~~ — emailed
- ☒ ~~Catalog fdbk~~
- ☒ ~~SEO fdbk~~
- ☒ ~~Anna (VDS) review: by Fri Feb 16~~
- ☒ ~~Digital Marketing fdbk~~
- ☒ ~~Address VDS formatting feedback~~
- ☐ **GTS fdbk (backend wishlist & guidelines)**
- ☐ **Andy/VDS Qs:** Flow into a WOW template (for specific journey segment)? TBD based on convo w Andy, Anna, Allison, JJ
 - ☐ Let Catalog, Device Marketing, SEO & working team know once updated doc complete & share link/centralized location

To do w Catalog:

- ☐ Catalog content matrix (work session scheduled)
- ☐ Discuss Catalog Launch & PDP Guidelines
- Q: Catalog remove content-centric guidelines from their [Launch & PDP guidelines](#) and instead include a link to these?
 - Keeps this doc as single source of truth for content in the tool for efficiency
