

Learn Journey Segment: Fixed? CTA Content Systemization WIP

(1)

Example projects:

- Family LP
- Deals Ecosystem
- GW ad tiles enhancement

Some proposed guidelines stem from [Compare Button CTA Verizon CMI UXR Deck](#) research

Caveat:

I'm not sure these qualify as truly fixed, as they would only apply to upper shop funnel (Learn) – there are cases deeper in shop journey where something more specific or customized (based on audience/journey) would be preferable. For example, “Switch to myPlan.”

So maybe these should be added to the CTA matrix instead?

CTA text	When to use	Discovery/Notes
Buy/Buy now	Don't use unless it's a product customers have the ability (and desire) to purchase instantly Temporary exception: Ad tiles (more guidance TBD)	Supporting research Also aligned/supported by with existing 3.0 guideline: <i>Only use the word “now” when the button describes the immediate following action. For example, don't say “Buy now” if the button leads to a PDP.</i>
Get details	Linking to model-level PDPs (e.g. iPhone 15) within GW Compare tool and Services PDPs (e.g. Smart Family)	Supporting research Follow-up testing: “Get details” vs. “Learn more”?
Details	Legal/disclaimer offer or product copy that typically appear in a modal or for mobile, their own dedicated page	Examples: Offer details on GW and PDP Product details: “Get it fast” fulfillment products on GW and PDP

Shop, Shop [GW name or items], Shop all	Linking to gridwalls (GW) or a comprehensive LP (ex. Deals, Accessories LP, etc)	
	Wishlist > Pick up where you left off	Currently in discovery phase for NGD Recently Viewed
Shop [GW name or items], Shop all	Can also link to LPs that feature all of a category that may link out to GWs	Example 1 , Example 2
Learn more	Links to service PDPs, LPs that don't link to GWs, articles, FAQs, partner sites	New: Linking to Quick View (which is basically PDP) from Homepage tile ☐ Homepage to Cart Spot...
	Homepage > wishlist	Currently in discovery phase for NGD Recently Viewed
	Homepage > cart preview?	Currently in discovery phase for NGD Recently Viewed
Add	For stackable offers only	Examples: NGD perks and accessories tiles

Audit & stress test proposed against BAU examples:

Also note Anna's original guideline for Learn More in CTA matrix.

For PDP-linked ad tiles:

The impressive iPhone 14 Plus. Get four, on us.

Also get 4 lines on Unlimited Welcome for \$120/mo. With Auto Pay. Plus taxes and fees. No trade-in required. [Details](#)

Buy now >

The one use case I've come across so far where additional content would need to be addressed w this change:

- "Get details" would be redundant of legal "Details"
- ~~Possible solve: Per CTA matrix, we have the option to sub out "Details" with "Terms" (short for Terms & Conditions) but legal has very specific use cases for using "Terms" (or Terms & Conditions) — check on level of flexibility with this or if ok to use for this use case — Erno and Lacy~~
- **From Lacy:** "Generally, Details - I restrict for offer details. Terms are actual terms and conditions. Learn Mores take you to a PDP for the offer."

Additional possible use cases to look through:

[Abby's work on services & perks Hub 3.0 reskin](#)

- Future: Link to updated/live hub designs

Definitions WIP

Service-level PDP: A product details page that relates to a product that's a service.

<https://www.verizon.com/solutions-and-services/add-ons/>

Model-level PDP: A product details page that focuses on a specific product SKU. Ex:

<https://www.verizon.com/smartphones/apple-iphone-15/>. Can be linked to a GW or stand alone?

Landing page:

Gridwall (GW): Digital storefront

FAQ:

Alexa ID'd Amanda & Karin Goers as key partners on this work – set time w them next once I've conducted more thorough audit & stress test & adjusted recos or outlined additional or adjacent changes as needed.

Where I left off:

Amanda & Karin haven't started this initiative yet, but once I'm ready, meet with them and share this (after adding examples to stress test more)

Thought to start with: What could be our one exception for the ad tile linking to PDP instance? Would it have to be something unique? Our one instance of being more specific? For ex. Would "Select options" or "Customize yours" etc; – refer to compare button test options & think about what else could be tested?

Stemming from [this](#) conversation with Anna

Example projects:

- ~~GW sort & filter (2024 ACT53 roadmap)~~

~~Proposing all left rail filters that require buttons should be updated to utilize “Show results” and “Clear all.”~~ This update has been completed for all GWs.

Note: Per Jamie filter auto-apply work on hold pending NGD (removing “Show results” & “Clear all” altogether).
